PROFILE

Computer Engineering graduate with hands-on experience building and deploying end-to-end machine learning applications using Python, Scikit-learn, and Flask, and creating Power BI dashboards for business reporting. Skilled across the full ML workflow: data cleaning, EDA, feature engineering, model training and evaluation, and cloud deployment (Render, Streamlit Cloud). Seeking an AI/ML Engineer, Data Analyst, or Python Developer role where I can contribute immediately and grow.

SKILLS

Languages: Python, SQL

Machine Learning: Regression, Classification, Clustering, Supervised Learning, Unsupervised Learning, Feature Engineering, Model Evaluation, NLP (TF-IDF)

Libraries: Scikit-learn, Pandas, NumPy, Matplotlib, Flask

Data Analysis: Data Cleaning, Data Preprocessing, Exploratory Data Analysis (EDA)

BI and Visualization: Power BI

Tools and Platforms: Git, GitHub, Jupyter Notebook, PyCharm, Linux, Render, Streamlit Cloud

Foundations: Linear Algebra, Probability, Statistics

EXPERIENCE

Python and AI/ML Intern | Encodedots | Jul 2025 - Jun 2026

- Built and deployed a Car Price Prediction web app using Python, Pandas, Scikit-learn, and Flask; performed preprocessing and feature engineering, achieving an R2 score of 0.90 using Linear Regression.
- Developed an SMS/Email Spam Classifier using TF-IDF vectorization and Naive Bayes; achieved 98.07% accuracy and deployed the application on Streamlit Cloud.
- Designed an interactive Power BI dashboard for an e-commerce sales dataset, tracking KPIs including total sales, profit, quantity, and average order value, with breakdowns by month, state, payment mode, and product category.
- Completed structured training in Python, SQL, and database management, applying concepts directly to ML projects.
- Followed the complete ML workflow across projects, including EDA, preprocessing, feature engineering, model evaluation, and deployment.
- Maintained version control using Git/GitHub across development environments including Jupyter Notebook, PyCharm, and Linux.

PROJECTS

Car Price Prediction System

- Developed a full-stack ML web application to predict used car prices, deployed on Render for real-time inference
- Preprocessed raw data and conducted EDA to identify key pricing factors; applied feature engineering to improve model input quality
- - Trained and evaluated a Linear Regression model achieving an R2 score of 0.90

SMS/Email Spam Classifier

- Built an NLP-based spam detection app using TF-IDF vectorization and a Naive Bayes classifier; achieved 98.07
- Implemented full text preprocessing pipeline (tokenization, stopwords removal, vectorization) before model training
- Deployed the application on Streamlit Cloud for live, browser-accessible predictions

EDUCATION

Bachelor of Engineering (Computer Engineering)

Government Engineering College, Modasa

2021 – 2025
